Joints – a question of taste

Professional chefs create harmony and surprising taste compositions on your plates – perfected depending on your individual taste. They achieve this by combining the finest nuances with spices and herbs and skilfully combining ingredients. PCI's grouting solutions can also put you in exactly this position. They create a significant contribution to ensuring that you can find the optically suitable grout color for every living space – in the color of the selected tile, contrasting with it or corresponding to other colors in the room. Just in line with your taste.

The color of the joint has a significant influence on the appearance of the tile and therefore that of the room. Take full advantage of the color range of the PCI Durapox® Premium Multicolor highlight product – and find the right color shade for every tile in the world. The result: Tile and joint unite optically and create your individual space. This color certainty can open up completely new design possibilities for you. Just like spices can also refine a dish and make it appear in a completely new light.

New Logo: Maximum Design Creativity

The maximum design creativity can be recognized on a new logo: the colorful butterfly. It represents limitless creative freedom and identifies PCI products with which you can completely design living spaces individually and therefore create them according to your taste. You can now become a designer and provide every room with its unique character – from private bathrooms to wellness areas, sitting rooms, kitchens, canteen kitchens and dining rooms and up to, and including, swimming pools.

PCI Durapox® Premium Multicolor

**Just in line
with your taste**

Find the suitable grout for every tile – grout colors
according to individual taste

For unlimited design opportunities

Brilliant colors and homogeneous joint surface

PCI Durapox® Premium Multicolor

Unlimited design opportunities for individual living spaces

PCI Durapox® Premium Multicolor is available in every preferred joint grout color shade. There are no longer any limits for your creativity. The epoxy resin mortar combines the technical highlights and processing properties of PCI Durapox® Premium with an unlimited variety of colors for individual design. Match up the joint color exactly to the tile color or find the matching contrast color. The unlimited color spectrum means maximum design freedom when planning and grouting your living space. The elastic sealant PCI Silcofug® Multicolor in matching colors complements the range.

PCI Colorcatch Nano provides you with professional color advice (see page 9).

Premium advantages

- Every joint grout color is possible – perfectly suited to your personal taste
- Very smooth grouting behavior just like cement-based grouting mortar
- Very easy to clean, resistant to acidic household cleaning products and cleaning agents

PCI Silcofug® Multicolor

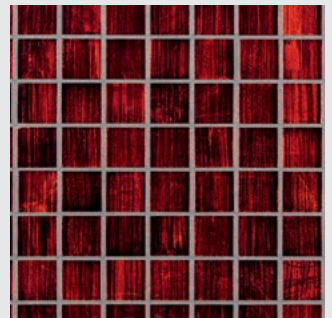

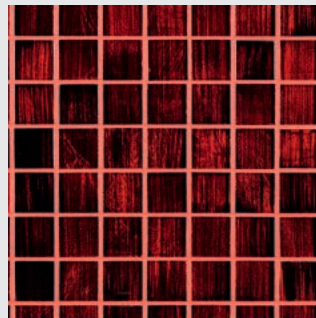

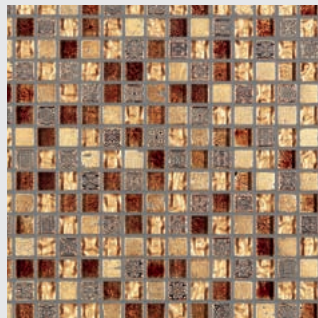

Silicone sealant in Multicolor color shades

No matter which color shade you choose:
with PCI Silcofug® Multicolor, you always get the
exact matching silicone color to your joint.

Joint grout colors determine the character of your room

The selection for the joint grout color has a large impact on the appearance of the floor or wall covering and thereby the whole room. Joint colors which are matched to the tile covering therefore make a room more peaceful and homogeneous. Slightly deviating color shades between the grouted joint color and the tile covering can structure and enliven the surface area – while more contrasting grouted joint colors can specifically emphasize or soften the character of the tile color.

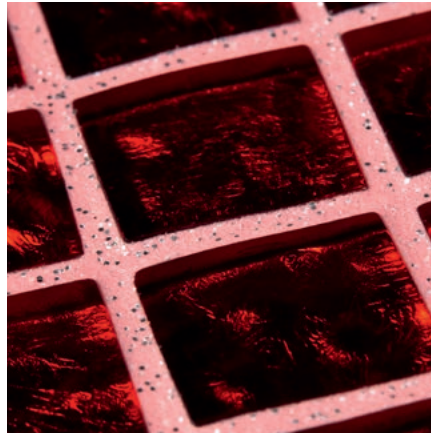

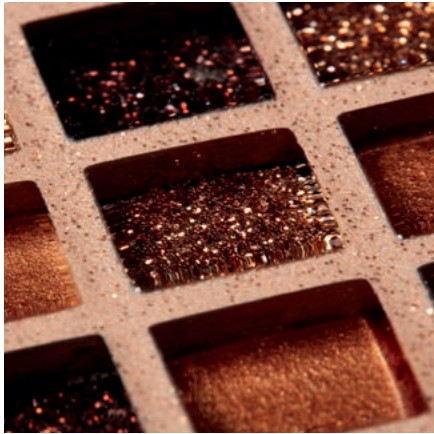

Same covering – completely different effect with a different joint grout color

PCI Premium Glitter

Luxurious effects

PCI Premium Glitter enhances and highlights the joint grout color with additional design effects. The metallic glitter in the copper, gold or silver colors – each in fine and coarse grade – provide the living space with a noble, sublime design according to your personal taste.

Luxurious glitter color shades in gold, copper and silver

PCI Colorcatch Nano

Professional and customer-individual advice

PCI Colorcatch Nano enables you to quickly and simply find the suitable joint color. For individually designed spaces.

The digital color advisory service visualizes suitable color harmonies in a matter of seconds and helps to achieve individual and impressive solutions. The tool is very easy to use and provides the basis for harmonizing results.

Achieving individual grouted joints by utilizing professional customer advice

- Increases your customer-individual advisory competence
- Inspired by utilizing simple and digital color selection
- Your key for opening up new customer segments

The PCI Colorcatch Nano works in conjunction with the PCI app MULTICOLOR for iOS and Android.

PCI Color Fan Multicolor

All PCI Multicolor colors are shown in the color fan based on high-quality, mineral color shades. This completes the PCI Multicolor package in combination with PCI Colorcatch Nano.

PCI Durapox® Premium

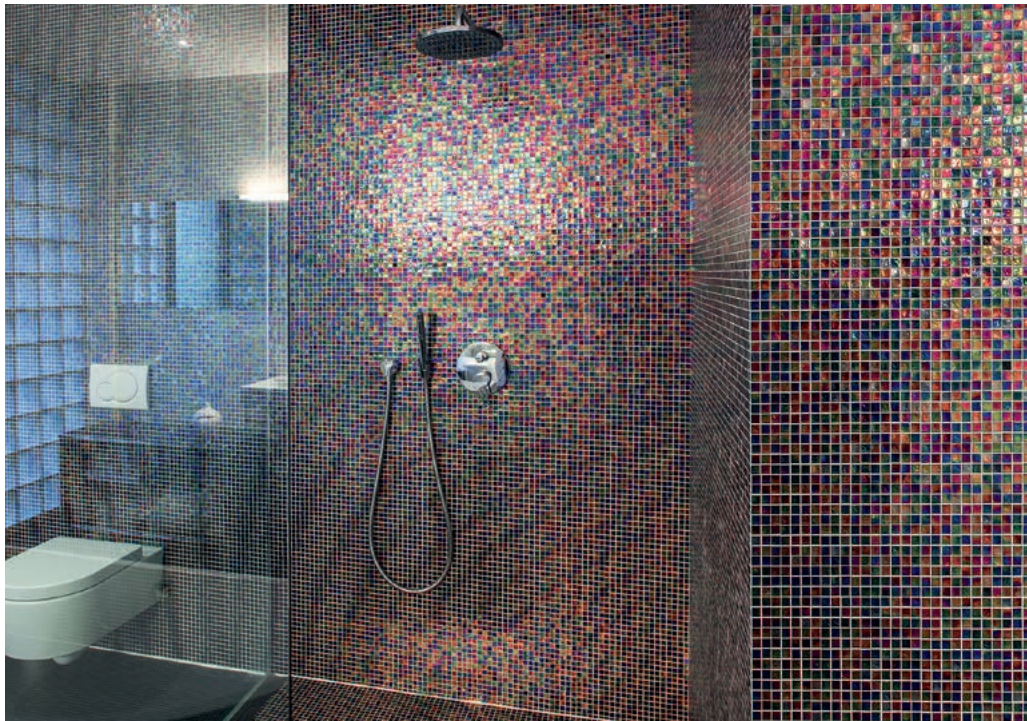

Impressive colors

Particularly brilliant colors, homogeneous joint surface

Easy to handle – simplest-possible jointing

Washing off without residual smears

with PCI Durapox® Finish

PCI Durapox® Premium

Epoxy resin mortar for grouting and laying tiles – just as flexible as a cement-based grouting mortar

The PCI Durapox® Premium epoxy resin mortar has the same smooth grouting behavior as a cement-based grouting mortar. It can be easily applied with one hand and no additional special tools are required for grouting. The small container size is ideal for private shower areas of 1 to 2 m². Especially suitable for grouting optically high-quality surface areas such as e.g. tiles, mosaics and porcelain stoneware. For chemical-resistant and water impermeable laying and grouting for wall and floor coverings.

Premium advantages

- Very smooth grouting behavior just like cement-based grouting mortar
- Washing off without residual smears with PCI Durapox® Finish
- Brilliant in 17 color shades for individual designs
- Very easy to clean due to the easy-to-clean effect and resistant to acidic household cleaners and cleaning agents

PCI Durapox® Finish

Washing aid for epoxy resin mortar

- 500 ml spray bottle (liquid)
- 750 g tin (concentrate as an additive in washing water)

PCI Nanofug® Premium

**Beauty at its most
universal**

Fine surface finish and brilliant coloring for grouted joints
with very high optical requirements

Available in 28 different colors

Very easy to clean

PCI Nanofug® Premium

Variable, flexible joint grout for all tiles and all natural stone

PCI Nanofug® Premium is a true all-rounder. It is also recommended for grouted joints with high optical requirements. The Premium range grout is perfectly suitable for all tiles and all natural stone. For all types and formats. Due to its unique value-added combination of optical and technical properties, it is the reliable selection for building developers, builders and planners.

A wide selection of grout colors provides suitable design options for every appearance – coordinated to current trends and in particular to the trendy wood and concrete appearances of tile coverings. The earth-like shades harmonize perfectly with modern wood-imitating tile surfaces. The grey and black shades match the trendy tile appearance with shades of grey and concrete look. PCI Nanofug® Premium tile coverings are therefore an option wherever wood-like, nature-inspired surface finishes are desired, even in wet areas. For a permanently beautiful and hygienic result. The new color shades result in mutually coordinated nuances in color harmony in 28 grouted joint colors – not only in brown shades but also in white-grey-black shades.

Premium advantages

- Fine surface finish and brilliant coloring for grouted joints with very high optical requirements
- With a longer working time of approx. 40 minutes and earlier walk-on curing strength after approx. 2 hours
- Improved protection against certain mould growths and micro-organisms
- Very easy to clean due to the easy-to-clean effect and resistant to acidic household cleaners and cleaning agents

Recommendations which make your work simpler

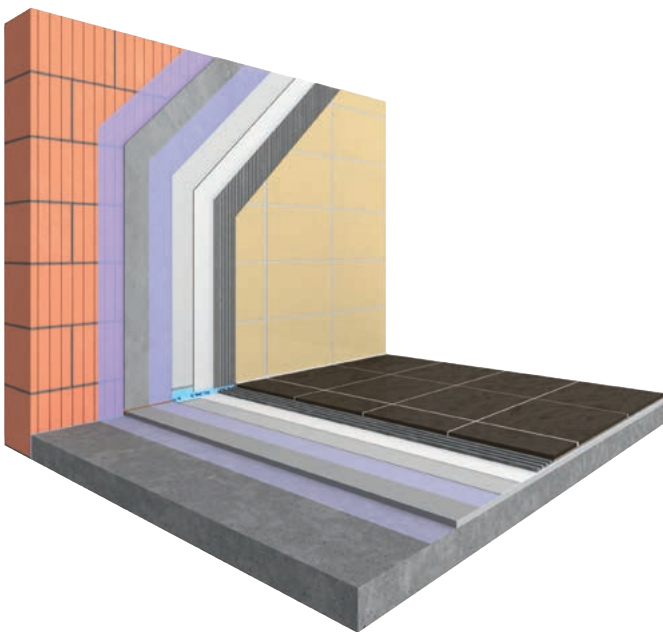

Application recommendations for cement-based joint grouts

PCI Nanofug® Premium or PCI Nanofug®? Selecting the correct grouting mortar is subjected to various criteria. The stated mortars can be variably applied but still however have their individual strengths. PCI Nanofug® Premium has a unique added-value combination created by optical and technical properties and is always a reliable choice.

The following table will aid you in order to select the right cement-based grout depending on the material to be grouted.

Covering / Flexible grouting mortar	Fully-vitrified tiles	Vitrified tiles	Non-vitrified tiles	Natural stone
PCI Nanofug® Premium	++	++	+	++
PCI Nanofug®	+	++	++	–

++ Ideal
+ Suitable
– Not suitable

System recommendation

The grout provides the finishing touch for the laid tile or natural stone surface. It also significantly creates the appearance for the covering and the room. With PCI you are always on the safe side from the very first coat of primer. Our systems cover all the working steps to ensure safe laying. In addition to the Multi-Use Tiling and Multi-Use Natural Stone Systems, we can also provide special system solutions, for example for swimming pools and balconies.

Perfect sealing for connection and movement joints

PCI Silcofug® Multicolor

Elastic sealant material for indoor and outdoor use

- Prevents fungal decay and mildew growth on the joint sealant
- Very good working properties
- Acid curing, available in 390 colors cf. PCI Durapox® Premium Multicolor

PCI Silcofug® E

Elastic sealant material for internal and external areas

- Prevents fungal attack and mould attack on the sealant
- Resistant to household cleaning materials and disinfectants
- Acid cross-linking, now in 28 new colors

PCI Carraferm®

Silicone sealing material for natural stone

- Does not cause edge-zone discoloration
- Ideal for sealing connection and movement joints, also with natural stone sensitive to discoloration
- Neutral cross-linking

Notes for color determination

The PCI grout colors will be produced according to your color requirements. With all due care on your part and on our part, there may be slight color shade deviations from the selected original color due to screen deviations on the display, processing technologies and various production batches. Different light influences on the laying material in the installed condition must be taken into account during consultation and/or color selection. In case of uncertainty, it is recommendable to execute a test grouting and/or make a comparison with the grout color slides. The grout color slides have been created on the basis of original samples. Due to the printing process, there may still be slight differences in the colors. PCI Augsburg GmbH cannot accept any liability for measurement errors and/or improper handling of the PCI Colorcatch Nano.
