

**Glass mosaics and joints
with harmonized colors**

New

PCI Durapox[®] Premium Harmony

Epoxy resin mortar especially for grouting glass mosaics

- Ideal for laying and grouting multi-colored glass mosaics
- Harmonious color progression – assumes the color of the surrounding glass mosaics
- Very creamy consistency – like a cementitious grout

PCI Durapox® Premium Harmony

Optimum color harmony thanks to high-refraction glass microbeads

Harmonized colors: PCI Durapox® Premium Harmony is an innovative epoxy resin mortar developed especially for grouting multi-colored glass mosaics on walls and floors. It is the perfect addition to the PCI grout range.

The grouting material is transparent and almost invisible. It collects light and reflects the light transmitted by the surrounding mosaic stones. As a result, the joint assumes the color of the glass mosaic without adversely affecting the overall appearance. This effect highlights the colors of the glass mosaic in the ideal way, making the covering considerably more attractive.

Premium benefits

- Ideal for bonding and grouting multi-colored glass mosaics
- Harmonious color progression – assumes the color of the surrounding glass mosaics
- Water-impermeable, resists staining and dirt (chemical-resistant)

Benefits for tiling contractors during use

- Very creamy consistency – like a cementitious grout
- Very easy washing without residual smearing using PCI Durapox® Finish washing aid
- No special tools needed for grouting

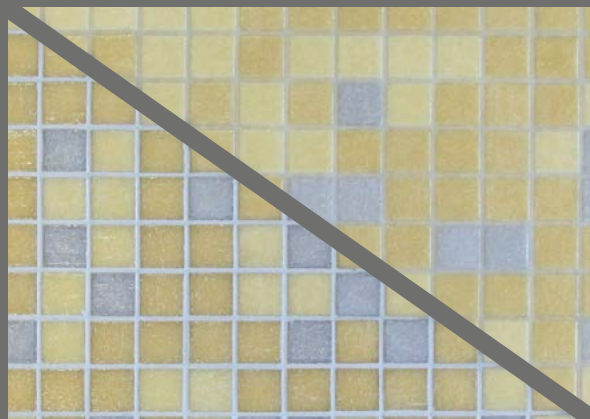

- Sales unit: 2 kg pail

Very creamy insertion behavior, like a cementitious grout. Only one hand needed, no special tools required.

Very easy washing without residual smearing – with PCI Durapox® Finish washing aid.

Compared with a cementitious grout, the harmonious effect of PCI Durapox® Premium Harmony on the surface of a glass mosaic can clearly be seen.
